

Introduction

85 Tompkins Street, Staten Island, New York 10304
Tel: 718.556.2004 / Fax: 718.556.2007

At Control Electric, we see the big picture in the smallest of details. Our ability to provide responsive, quality services is led by the understanding that attention to detail starts at the top. Two principal owners, both former electricians, provide the leadership to a support staff that punctuates the focus of the company. Our capacity to increase our workforce to meet any demand is due to the depth of our core employees and our strong organizational experience. Our unique capabilities have made it possible to expand our growing list of customers who have come to expect quality results and personal attention with a broad range of services.

Since 1997 Control Electric has successfully developed and maintained a strong presence in a few specialized industries.

Experiences in the Commercial field include electrical and data installations for office build outs as well as specific work in major switch sites, Communications rooms and infrastructure work in most of the New York City Tunnels. Our institutional work has included some specialized work such as MRI suites, research facilities, Cryogenic preservation, as well as the patient room build outs. The Retail sector services a much broader range of customer. This work can vary from high end large Manhattan construction projects, Mall stores, strip mall anchor stores and smaller spot stores. We also manage a constant base of employees for the purpose of providing "On Call" services to our steady customers for any reason including scheduled site maintenance, emergency repairs, or any additional needs that may arise.
