WHAT IS “TRUE VERTICAL INTEGRATION” AND HOW WILL IT IMPACT YOUR ENERGY BILLS?

“True Vertical Integration” represents our commitment to a CHP partnership that extends from consultation and concept, to construction, completion, and beyond.

Along with the design and development of our innovative Combined Heat and Power (CHP) systems, Aegis Energy Services is responsible for the complete integration of that system in your facility. Our team handles everything from feasibility studies to engineering, installation, service monitoring and maintenance.

No dealing with outside vendors. No outsourced manufacturing. We are accountable for every part, every process, and every projection.

True Vertical Integration means Aegis Energy Services can provide turnkey, modular CHP systems with reduced costs and increased accountability through all phases of the project.

OUR STORY

Aegis Energy Services, Inc. is an innovative Combined Heat and Power (CHP) company based in Holyoke, MA. Founded in 1985, Aegis Energy Services’ modular systems are currently utilized across the Northeast and Mid-Atlantic providing sustainable, clean power options for a wide array of customers.

Aegis Energy Services is a recognized leader in the cogeneration field having earned numerous awards for growth and recognition from both state and federal agencies for installations that have resulted in reduced emissions.

INTEGRITY BY THE NUMBERS

At Aegis, we keep score. The numbers that represent estimated energy savings, reduction in emissions, and overall efficiency of your system are important to us. Those numbers are at the core of our commitment to customer service.

As your CHP partner, we live by those numbers. Those numbers serve as guidelines, benchmarks, and milestones. Real solutions are only attainable through the use of real data.

And the numbers don't lie.

At Aegis Energy Services we strive for accuracy and accountability and if we live by the numbers, we can promise an honest, educated assessment of the real value of Combined Heat and Power for our clients.

High ROI

Rapid Payback On Investment

Aegis Energy Services Combined Heat and Power systems are modular and compact which means the systems can fit easily into most buildings and are scalable for larger projects. The systems can be installed indoors or outdoors without an interruption to normal business activities. The systems runs quietly and have easily accessible digital displays and a user-friendly interface.

Included in its more than 500 CHP installation and maintenance projects are the EPA award-winning installation at the National Archives and Records Administration, the AAA- 4 Diamond Saybrook Point Inn and Spa in Old Saybrook, Connecticut, and multiple installations at the renowned Tudor City in New York.

WHAT IS CHP?

Aegis Energy's Combined Heat and Power (CHP) systems deliver two forms of energy, heat and electricity, from a single fuel source (natural gas). CHP is a highly-efficient technology that reduces energy costs and harmful emissions as recognized by the US EPA.

- ▶ High ROI (3-5 Year Payback)
- ▶ Best Defense Against Rising Energy Costs
- ▶ Infinite Life With Maintenance Program
- ▶ Remote Monitoring & Control
- ▶ Qualifies For Conservation Credits And LEED Points
- ▶ Environmentally Friendly & Quiet

OUR ARENA

Aegis Energy's Combined Heat and Power (CHP) modular systems are customized for a variety of facilities, from healthcare and assisted living facilities, to recreational and multi-residential complexes, and hotels. There are also institutional, educational, and industrial facility applications.

FEATURES AND BENEFITS

- Highly efficient units for all property sizes
- Free electricity
- Take advantage of state and federal grant incentives
- Standby power in the event of a grid failure
- Shared Savings program requires no capital investment
- Complimentary energy evaluation & savings analysis
